

Title: ROTARY ENGINE  
SN: 10/781,969

Examiner: Thai-Ba Trieu  
Art Unit 3748

**In the Specification:**

Please replace the paragraph at page 6, line 11, with the following paragraph:

As shown in the drawings, the dogs pivot relative to the annular chamber as they alternately hold and release the pistons. The dogs pivot in opposite directions due to the force that is transferred to them by the pistons, which results from ignition of the fuel in the sub chamber, and between the pistons. Other means for selectively timing and holding the pistons may be employed.
